

# CRACK ISOLATION SYSTEM

Crack Isolation System (CIS) is designed to mitigate surface cracking in new and existing plaster systems by integrating woven fiberglass mesh into the base coat prior to applying the finish.

The CI System can either embed the mesh directly into the wet brown coat or embed mesh into an acrylic modified base coat over the existing plaster base coat or finish. When properly installed, this mesh reinforces the stucco and helps to reduce the appearance of cracks. It is an excellent choice to repair stucco cracking on existing walls.

## SPEAKER: MIKE ROBERTS

CALIFORNIA PLASTERING CONSULTANTS

Mike has over 40 years' experience in the construction and stucco industry, and he holds plastering licences in California, Nevada and Arizona.

**date:**  
Wednesday, March 10, 2010
